The Diabetes Collaborative: Reach, Register, Reduce and Replicate

FIVE-YEAR OUTCOMES

Reach
- Developed sustainable infrastructure to target diabetic patients.
- Established diabetes project and chronic care teams.

Register and Educate
- Increased patient registry from 200 to more than 3,600.
- Created seven bilingual and low-health literacy diabetes education videos.

Reduce
- Decreased average HbA1c (blood sugar) from 8.2 to 7.6.
- Produced positive clinical outcomes: blood pressure, cholesterol, eye and foot exams, self-management goals, microalbuminuria screenings and diabetic visits.

Replicate
- Implemented a sustainable model and replicated it at a second FQHC.
- Received external funding to replicate Diabetes Collaborative at third location.

Received local and national recognition for the Diabetes Collaborative, including the AHA NOVA Award®.
